### **Business Statement:**

Baxa Corporation is a leading developer and manufacturer of innovative devices and systems for the safe and efficient preparation, handling, packaging, and administration of medications. The company's achievement of certification to the International Standards Organization (ISO) quality standards and registration to EN46001 (CE) assure its products meet the highest level of design and production capability in the industry.

### **Key Products and Applications:**

Baxa manufactures and markets a wide range of healthcare products used worldwide in hospital, critical care and alternate site pharmacies:

The **Exacta-Med® Oral Liquid Dispenser** provides accurate and safe delivery of oral liquid medications through a special design that will not accept a needle. Sterile oral dispensers are used for delivering respiratory therapy drugs, for delivery of medication to immunocompromised patients, and for administering topical anesthesia and ophthalmic preparations.

The **Rapid-Fill™ Automated Syringe Filler** automates the process of filling, capping and labeling sterile syringes in the pharmacy, minimizing the potential for contamination and reducing pharmacy overhead for batching applications.

The **Baxa Repeater™ Pump** was the first peristaltic pump developed exclusively for pharmacy applications. Designed for batch filling of oral medications and pharmacy admixture applications such as drug reconstitution and filling of IV bags and infusion devices, the Repeater Pump features volume accuracy not found in competitive pumps. This patented technology is at the core of all the Baxa pump products.

The **Exacta-Mix™ Pharmacy Pump** operates with the same precision and accuracy of the Repeater pump, but its unique valve controller directs fluid delivery from six different sources. Direct Entry™ Software provides continual quality assurance for volumetric and gravimetric verification of solution accuracy.

The **Exacta-Mix 2400 Compounder** is the state-of-the-art for multi-source automated compounding. Combining safety, accuracy and specialized software, the EM2400 can accommodate up to 24 discrete source ingredients.

The **MicroMacro™ TPN Compounders** also build on the accuracy of the Repeater pharmacy pump, with valve controllers that allow the selection of 12 or 23 source ingredients. The Baxa MicroMacro product line features the only compounders which allow custom mixing of both macro and micro additions for total parenteral nutrition (TPN) admixtures. TPN-PC software monitors volumetric and gravimetric audits for quality assurance and accuracy.

The **Baxa MicroFuse® Infuser** is an economical syringe delivery device for intermittent administration of IV antibiotics and other medications. Syringe infusion offers a significant cost advantage over proprietary IV systems, while providing accurate and controlled drug delivery.

The **Skills Training, Academics and Resources (STAR) Center** is the first purpose-built facility for professional development in pharmacy, healthcare and environmental control. The Baxa headquarters facility features an 836 ft<sup>2</sup> Class 7 positive-pressure cleanroom, a 300 ft<sup>2</sup> negative-pressure cleanroom and a 1450 ft<sup>2</sup> classroom.

Baxa also manufactures a complete line of complementary products and disposables designed to streamline the operations of hospital and alternate-site pharmacies.

**Founded:** 1975, as Baxa Laboratories

**Employment:** 400+, worldwide

**World Headquarters:** Englewood, Colorado  
Sales, marketing, manufacturing and R&D facilities.

Manufacturing Facility: 27,000 ft<sup>2</sup>; 8,000 ft<sup>2</sup> ISO Class 8 cleanroom

Warehousing Facility: 30,000 ft<sup>2</sup>

**Subsidiary (Registered Agent):** Baxa Europe Limited, Bracknell, UK

Corporate Offices: 10,000 ft<sup>2</sup>

Warehousing Facility: 5,000 ft<sup>2</sup>
